**PRESS RELEASE**

20/11/2023

## **MOBILIZE HELPS URBAN AND ROAD TRANSPORT PROFESSIONALS TOWARDS SUSTAINABLE MOBILITY**

**#wearemobilizers**

In keeping with its commitment to mobility, and particularly the transition to low-carbon mobility, Mobilize will be presenting its solutions for the goods and services transport industry at the SOLUTRANS trade show (Hall 4 - Stand E026/E025):

- Bento, an ultra-compact all-electric minivan with a range of 140 km and a load capacity of 1m<sup>3</sup>.
- Mobilize Power Solutions with custom charging solutions and infrastructure for LCV and HGV fleets.
- Mobilize Fleet Monitoring solutions to monitor and optimise fleet management.

## Mobilize Bento: the all-electric minivan designed for local services

Scheduled for launch in the first half of 2024, Bento was designed for business customers looking for a compact, practical and reliable vehicle for delivering goods and services (repairs, maintenance, personal services, on-demand deliveries...) in and around urban areas, which are enforcing increasingly stringent requirements in terms of environmental performance and footprint.

- An eco-responsible vehicle:
  - Designed using 50% of recycled materials (when the average is 15%), Bento is an all-electric, single-seater minivan with a range of 140 kilometres and a top speed of 80 km/h.
  - Bento is able to access ultra-low emission zones, since it produces no emissions or noise.
  - The charging cable attached to the vehicle can be equipped with a standard connector (*for domestic use*) or Type 2 connector (*compatible with public charging points on the street, in businesses or in car parks*)
- A comfortable and safe vehicle:
  - Bento is equipped with an airbag, a feature rarely found on quadricycles, as well as air conditioning.
  - The glass side doors around the cabin open vertically, so users can get out on the right side of the road or slip between two parked cars. This architecture is also safer for pedestrians and cyclists, since it does not encroach on the road or pavements.
- A practical vehicle with a custom design:
  - Bento has a load capacity of 1m<sup>3</sup> (*80 kg payload*) and a closed cargo box that can be configured in several ways to meet the needs of the companies providing local services.
  - Both the body and cargo box can be customised.
- A connected vehicle:
  - Bento comes with native connectivity, which is essential for managing corporate fleets. The system uploads specific vehicle data – such as charge status or location – in real time to a secure online server, for forwarding to the company's fleet management platforms.
  - Bento also features a digital key to access and start the car, from a smartphone for example, making it easier to share and rotate fleet vehicles.

## Custom charging solutions with Mobilize Power Solutions

Charging infrastructure has to adapt to business needs, and not the other way round. **Mobilize Power Solutions** supports business users running all types of fleet – light electric vehicles, LCVs or HGVs – helping them make the transition to sustainable mobility, with:

- advice on charging strategy, based on their specific operational, financial and energy requirements;
- deployment of appropriate charging solutions and implementation of operational monitoring;
- Service continuity for businesses, with preventive and corrective maintenance and 24/7 support.

## Solutions for monitoring and optimising fleet management

**Mobilize Fleet Monitoring** is a package of solutions for monitoring, managing and optimising fleet management.

- **Mobilize Fleet Data** provides easy, real-time access to raw vehicle data such as mileage, maintenance and operation alerts, range for electric vehicles, and geolocation, as well as driving information such as current fuel and energy consumption, and an eco-driving score for educational purposes.
- **Mobilize Fleet Connect** is an online and mobile platform for smart, simple fleet management. It provides a complete service encompassing real-time data on vehicle operation, as well as financial and mobility aspects. Fleet managers are able to better plan expenditure, manage maintenance, and reduce both energy consumption and carbon emissions by planning business travel in advance using geolocation data.

### About Mobilize

Mobilize, the brand of Renault Group dedicated to new mobility, offers a wide range of services around the vehicle thanks to an integrated technological platform: financing, insurance, payments, fleet management, energy, maintenance, and refurbishing. Built around open ecosystems, Mobilize encourages a sustainable energy transition, in line with Renault Group's goal of achieving carbon neutrality in Europe by 2040, and its ambition to develop value from the circular economy.
