MOBILIZE FAST CHARGE: THE NEW ULTRAFAST CHARGING NETWORK IN EUROPE

- **To simplify charging on long drives, Mobilize is partnering with Renault dealerships to launch Mobilize Fast Charge, a network of ultrafast charging stations.**
- **Mobilize Fast Charge will be open to all electric vehicles.**
- **It will encompass 200 stations in Europe.**
- **While charging their vehicle, drivers will be able to access a 24/7 rest and service area.**
- **Mobilize Fast Charge stations will use an innovative charging system that limits the impact on the grid and charges several vehicles simultaneously without a sag in power.**

To make long drives in electric vehicles simpler, Mobilize and Renault dealerships are launching Mobilize Fast Charge, an ultrafast charging network. Most of the stations will be at Renault dealerships less than 5 minutes from a motorway or expressway exit. The network will encompass 200 stations in Europe by mid-2024. In France, Mobilize will install 90 stations – or one ultrafast station ever 150 km on France's trunk roads.

Drivers will be able to charge their vehicles 24 hours a day, 7 days a week. Each station will have 6 ultrafast charging points, supplying up to 400 kW, making this network one of the most powerful in Europe.

Eventually, drivers of electric vehicles will be able to travel from Hamburg to Seville with complete peace of mind.

“One of Mobilize’s objectives is to make mobility cleaner and more accessible. Mobilize Fast Charge is helping by providing all electric vehicle drivers with access to ultrafast charging points whatever brand they drive. To make this happen, Mobilize is leveraging two of Renault Group’s strengths: its granular sales network and Mobilize Power Solutions’ expertise,” said **Clotilde Delbos, CEO, Mobilize.**

Preferential access to a rest and service area

While charging their electric vehicle, drivers will be welcome to use a quiet and comfortable rest area where they can enjoy a coffee or snack, use the Wi-Fi connection, charge their phone or laptop, or even play a videogame before continuing their journey.

Holders of Mobilize recharge cards will also enjoy preferential rates throughout the Mobilize Fast Charge network.

An innovative solution that limits the impact on the power grid

To reduce Mobilize Fast Charge stations' impact on the grid, the charging mechanism relies on a smart energy management system combined with stationary storage capacity using electric vehicle batteries and, in some places, solar power from photovoltaic panels.

The storage system will be able to deliver a full 600 kW of instantaneous power, even when several cars are charging at the same time.

The system also cushions its impact on the national grid, lowers the cost of connections to the grid and provides an ultrafast charge at the best price for people using electric vehicles.

Mobilize Power Solutions, the expert for charging solutions

The entire project is being managed by Mobilize Power Solutions, Mobilize's specialist in tailored charging solutions for electric and plug-in hybrid vehicles. Following its expansion in the corporate market, and more recently among private customers, Mobilize Power Solutions is now bringing its expertise to long-distance drivers.

Mobilize Power Solutions conducted preliminary studies to identify the best locations and size each of the stations it will set up and operate to develop the entire Mobilize Fast Charge network.

about Mobilize

Mobilize, the brand of Renault Group dedicated to new mobility, offers a wide range of services around the vehicle thanks to an integrated technological platform: financing, insurance, payments, fleet management, energy, maintenance, and refurbishing. Built around open ecosystems, Mobilize encourages a sustainable energy transition, in line with Renault Group's goal of achieving carbon neutrality in Europe and its ambition to develop value from the circular economy. For more information, visit mobilize.com or follow Mobilize on sur Twitter, Instagram and LinkedIn.

About Mobilize Power Solutions

Mobilize Power Solutions, an expert in bespoke charging solutions for electric and plug-in hybrid vehicles, within the Mobilize ecosystem, is simplifying the switch to electric mobility for professional and private customers. With services ranging from consulting to station installation, and on to operation and maintenance, Mobilize Power Solutions supports its customers by addressing their needs for charging in companies, at home and on the road. Mobilize Power Solutions is currently operating in 11 key electric vehicle markets in Europe: Spain, Portugal, France, Germany, the United Kingdom, Switzerland, Austria, Belgium, the Netherlands, Italy and Luxembourg.
